Definition of Ready (DoR)

Contents

1. DoR for a story

The Definition of Ready defines whether a story is ready or not to be implemented in a sprint by the team. Our criteria are:

- The story is *clear*:
  - The team has understood the whole story; there are no questions left.
  - The team has understood, which targets the stakeholder wants to reach with the story.
  - The team knows what the expected result of the story is.
  - The story is coordinated with the client/stakeholder

- The story is *feasible*:
  - The team knows a rough strategy of implementation for the story, thus a StoryPoint estimate is possible
  - The story is small enough to be realizable in one sprint on the back of the Definition of Done; an initial StoryPoint estimate exists.

- The story is *testable*:
  - Clear and effective acceptance criteria exist für the story.
  - The way of how the story is to demonstrate is clearly defined (*HowToDemo).*

2. DoR for the ProductBacklog

- A sufficient stock of the most important stories is ready in order to be able to plan about two complete sprints in advance.
